Question 1

Question 1: You are given the following clipping of a UML2 class diagram. Which of the following statements are true?

- ☒ ☐ An object of A may or may not contain objects of C.
- ☒ ☐ Objects of C and B can see f.
- ☒ ☐ An instance of A can see y.
- ☒ ☐ Objects of B and D can see g.

Question 2

Question 2: Associations ...

... show possible relations between instances of classes.

... may have multiplicities to indicate to how many instances of a class the object is associated to.

... have to be identified by a unique association name

... may have navigable and non-navigable association directions.

Question 3

Question 3: Which of the following statements about compositions (composite aggregations) are true?

The composite aggregation is a transitive relationship.

The multiplicity of a composite aggregation may be ≥ 1 .

When the composite element is deleted, the parts also die.

In a composition, a part may belong to only one composite at a time.

Question 4

Question 4: You are given the following clipping of a UML2 class diagram. Which of the following statements are true?

If an instance of A is deleted, all contained instances of B are deleted as well.

One object of A is associated with exactly one object of C and two objects of B.

One object of A may contain two objects of B.

The diamond near A is called composition.

One object of B may be associated with multiple objects of A.

Question 5

Question 5: How do you model the following situation with a UML2 class diagram:

During one soccer season, multiple players participate in multiple games. Each player scores in each game a certain number of goals.

Question 6

Question 6: You are given the following clipping of a UML2 class diagram. Which of the following statements are true?

One object of A is associated with exactly three objects of C or any amount of objects of B; One object of C is associated with exactly two objects of A.

One object of A can never be associated with objects of C and B at the same time.

One object of C is associated with exactly one object of B.

One object of B is associated with exactly one object of A.

Question 7

Question 7: A class diagram describes ...

- ☒ ☐ shows the static view of a system.
- ☒ ☐ shows the interaction view of a system.
- ☒ ☐ shows the dynamic view of a system.
- ☒ ☐ shows the practical view of a system.

Question 8

Question 8: Primitive data types ...

- ☒ ☐ ... are defined strictly and cannot be defined by the user.
- ☒ ☐ ... are a synonym for classes.
- ☒ ☐ ... have no internal structure.
- ☒ ☐ ... cannot have operations.

Question 9

Question 9: How do you model the following situation with a UML2 class diagram?

On a blind date exactly two people take part. A person can take part in multiple blind dates. It is not sufficient to know a person to derive all his/her dates.

Question 10

Question 10: You are given the following clipping of a UML2 class diagram. Which of the following object diagrams are consistent with the class diagram?

✓ ☐ 

✓ ☐ 

✓ ☐ 

✓ ☐ 

✓ ☐ 

✓ ☐ 

Question 11

Question 11: You are given the following clipping of a UML2 class diagram. Which of the following statements are true?

- ☒ ☐ One object of A is associated with exactly one object of B or one object of C.
- ☒ ☐ Several objects of A are associated with exactly one object of B or one object of C.
- ☒ ☐ One object of B is associated with exactly two objects of A.
- ☒ ☐ The association between A and D can be navigated coming from A.

Question 12

Question 12: You are given the following clipping of a UML2 class diagram. Which of the following object diagrams are consistent with the class diagram?

Question 13

Question 13: You are given the following clipping of a UML2 class diagram. Which of the following statements are true?

- ☒ ☐ An object of A1 can directly be associated with an object of B.
- ☒ ☐ One (indirect) object of A may be associated with an object of A2.
- ☒ ☐ Each object of A1 has to be an instance of A.
- ☒ ☐ There exist objects of class B that are not associated with objects of class A2.

Question 14

Question 14: Enumerations ...

... are a user-definable data type which instances form a list of named literal values.

... may have operations.

... have the keyword `<<enumeration>>`.

Question 15

Question 15: You are given the following clipping of a UML2 class diagram. Which of the following statements are true?

- ☒ ☐ One person can be included in several groups.
- ☒ ☐ If a group is deleted all persons that are in that group are deleted as well.
- ☒ ☐ There are appointments that do not have any participants assigned yet.
- ☒ ☐ A participant that has been assigned to an appointment can be group and person at the same time.
- ☒ ☐ One group can consist of several persons.
- ☒ ☐ There are groups that do not have any persons assigned.
- ☒ ☐ It is possible to navigate from an appointment to the person who is in charge of it.
- ☒ ☐ Several persons are in charge of one appointment.
- ☒ ☐ If an appointment is deleted all references linked with it are deleted as well.
- ☒ ☐ An appointment can be made for multiple participants.
- ☒ ☐ It is possible to navigate from a person to the appointments that he is in charge of.
- ☒ ☐ Groups can only consist of persons, they cannot comprise of other groups.

Question 16

Question 16: Which kind of navigability belongs to which kind of arrowhead, considering the navigability from A to B?

- please choose -

- please choose -

- please choose -

Question 17

Question 17: How do you model the following situation with a UML2 class diagram:

Every product is in one of the three following states: solid, liquid or gas.

Question 18

Question 18: How do you model the following situation with a UML2 class diagram:

An event may be part of another event.

enumeration

reflexive association and aggregation

reflexive association

reflexive association and composition

Question 19

Question 19: How do you model the following situation with a UML2 class diagram?

Every restaurant has at least one kitchen, one kitchen is part of exactly one restaurant.

Question 20

Question 20: How do you model the following situation with a UML2 class diagram:

There are exactly two kinds of participants, namely members and guests. Guests are invited by members.

Question 21

Question 21: How do you model the following situation with a UML2 class diagram:
There are multiple different bird species, e.g. blackbird, thrush and starling.

Question 22

Question 22: You are given the following clipping of a UML2 class diagram. Which of the following object diagrams are consistent with the class diagram?

Question 23

Question 23: How do you model the following situation with a UML2 class diagram?

A season worker may be employed in one or several seasons, the beginning and the end of each employment period is saved.

binary relationship

class attributes

association class

ternary relationship

Question 24

Question 24: Which of the following statements are true?

Classes always have a section showing a textual description.

Every class in a class diagram must have attributes and operations.

Operations may have parameters and return values.

An attribute can have a type.

Question 25

Question 25: How do you model the following situation with a UML2 class diagram:

FurnitureFritz charges custom-made furniture which is assembled from prefabricated components.

Question 26

Question 26: How do you model the following situation with a UML2 class diagram:

Each talk is done by a professor or by an assistant.

Question 27

Question 27: You are given the following clipping of a UML2 class diagram. Which of the following statements are true?

- ☒ ☐ One object of a subclass of A is associated with * objects of C.
- ☒ ☐ Direct instances of A exist.
- ☒ ☐ One object of B is associated with 1..* objects of D.
- ☒ ☐ One object of D is associated with at least one object of B.

Question 28

Question 28: Which of the following statements about the given diagram are true?

- ☒ ☐ B is part of A.
- ☒ ☐ A is part of B.
- ☒ ☐ If an instance of A is deleted, the contained instances of B are not affected.
- ☒ ☐ The composite objects form a tree structure.
- ☒ ☐ If an instance of A is deleted, all contained instances of B are also deleted.
- ☒ ☐ The chains of aggregation links form a directed, acyclic graph.
- ☒ ☐ If an instance of B is deleted, all contained instances of A are also deleted.

Question 29

Question 29: You are given the following clipping of a UML2 class diagram. Which of the following object diagrams are consistent with the class diagram?

Question 30

Question 30: Which visibilities can attributes and operations of classes have?

- ☒ ☐ friends
- ☒ ☐ protected
- ☒ ☐ package
- ☒ ☐ all
- ☒ ☐ public
- ☒ ☐ private
